### Topic 6 : Introduction to Probability

PM Dr. Zaleha Binti Ismail  
Siti Nurashiken Binti Md. Sabudin

# Probability In Inferential Statistics

- Probability deals with calculating the likelihood of a given event's occurrence
- Probability predicts the kind of samples of a population.
- In inferential statistics, probability is used to explain about sample which can be generalize to explain about population.

# Probability and Frequency Distribution

Score	Frequency
1	2
2	1
3	2
4	3
5	1
6	1

What is the probability to get a score greater than 5?

# Probability and The Normal Distribution

The equation for normal distribution curve is :

$$Y = \frac{1}{\sqrt{2\pi\sigma^2}} e^{-\frac{(X-\mu)^2}{2\sigma^2}}$$

Percentage of score  $\mu$  in selected interval

The population distribution of a mathematics exam is normal. The mean  $m=68$  and standard deviation of selecting pupil who has a score greater than 80?

What is the z-score when  $x = 80$ ? Use table to find the corresponding  $p$  for the  $z$  value that has been obtained.

# What is the probability $z \geq 1$ ?

# What is the probability $z \geq 1.5$ ?

# What is the probability $z \leq -0.5$ ?

What z score separate the top 10% from the rest?

What z score contains the middle 60%?

# This is the IQ Score distribution.

What is the probability the IQ score is less than 130?

What is the probability that driver drive between 100km/h to 130 km/h?

What is the probability driver drives between 130km/h and 150km/h?

# Binomial Distribution

- Binomial data involves scale with 2 categories, example :  
heads or tails as outcome in tossing 2 coins.
- When tossing 2 coins, the possible outcomes are :  
TT, HT, TH, HH

# Binomial Distribution (2)

Outcome	Frequency	Probability
No head	1	1/4
1 head	2	2/4
2 heads	1	1/4

# Binomial Distribution (3)

- Distribution for tossing 4 coins.

HHHH

HHTT

HTTH

HTTT

THHT

HHTH

TTHH

THTT

HTHH

TTTH

TTHT

THHH

TTTT

# Binomial Distribution (3)

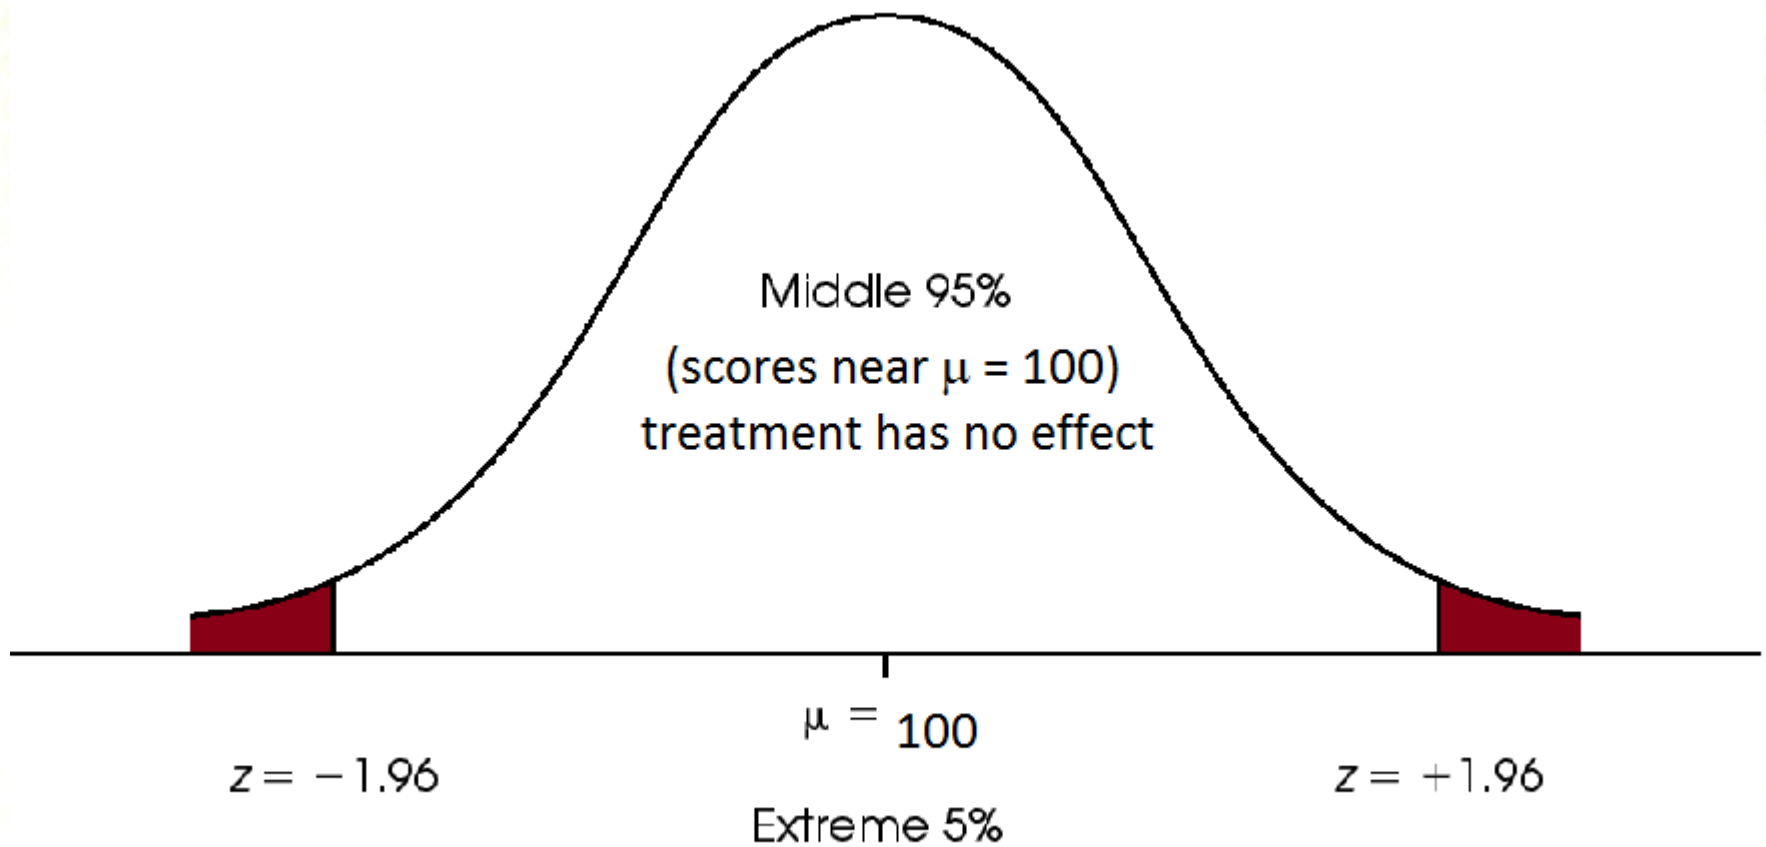

The binomial distribution is a histogram while the normal distribution curve

# Binomial Distribution (4)

This is a normal approximation of a binomial distribution for a true-false test results. The  $X$  values stand for number of correct answers.

What is the probability of selecting at random for a score greater than 45?

For a binomial distribution,

$$\mu = 10 \quad \sigma = 2.$$

What is the probability of getting score greater than 15?
