5.1 L'Hopital Rule

If you are doing any limit and you get something in the form of 0/0 or ∞/∞ , then you should probably try to use L'Hopital rule. The basic idea of L'Hospital rule is simple.

Consider the limit

$$\lim_{x \to a} \frac{f(x)}{g(x)}.$$

If both the numerator and the denominator are finite at *a* and $g(a) \neq 0$, then

$$\lim_{x \to a} \frac{f(x)}{g(x)} = \frac{f(a)}{g(a)}.$$

Example 1:

$$\lim_{x \to 3} \frac{x^2 + 1}{x + 2} = \frac{10}{5} = 2.$$

But what happen if both the numerator and the denominator tend to zero?

It is not clear what the limit is. In fact, depending on what functions f(x) and g(x) are, the limit can be anything at all!

5.1.1 L'Hopital Rule for 0/0

Suppose $\lim f(x) = \lim g(x) = 0$. Then

1. If
$$\lim \frac{f'(x)}{g'(x)} = L$$
, then
 $\lim \frac{f(x)}{g(x)} = \lim \frac{f'(x)}{g'(x)} = L.$
2. If $\lim \frac{f'(x)}{g'(x)}$ tends to $+\infty$ or $-\infty$ in the limit, then
so does $\lim \frac{f(x)}{g(x)}.$

ocw.utm.my

Example 2:

Find $\lim_{x\to 0} \frac{\sin x}{x}$ by L'Hopital rule.

Example 3:

Find $\lim_{x \to 1} \frac{2\ln x}{x-1}$.

Example 4:

Find
$$\lim_{x\to 0} \frac{e^x - 1}{x}$$
.

Example 5:

Find
$$\lim_{x\to 0} \frac{1-\cos x}{x}$$
.

Note: If the numerator and the denominator both tend to $+\infty$ or $-\infty$, L'Hopital rule still applies.

OPENCOURSEWARE

5.1.2 L'Hopital Rule for ∞/∞

Suppose $\lim f(x)$ and $\lim g(x)$ are both infinite. Then

1. If
$$\lim \frac{f'(x)}{g'(x)} = L$$
,
then $\lim \frac{f(x)}{g(x)} = \lim \frac{f'(x)}{g'(x)} = L$.
2. If $\lim \frac{f'(x)}{g'(x)}$ tends to $+\infty$ or $-\infty$ in the limit, then
so does $\lim \frac{f(x)}{g(x)}$.

Example 6:

Find
$$\lim_{x\to\infty}\frac{x^2}{e^x}$$
.

Example 7:

Find
$$\lim_{x \to \infty} \frac{(\ln x)^2}{x}$$

5.2 Improper Integrals

The definite integral

$$\int_{a}^{b} f(x) dx$$

is known as improper integral if either

- 1) one or both limits are infinite, or
- 2) f(x) is undefined at certain points on/in the interval.

Note: We called case:

- 1) as Type I
- 2) as Type II

ocw.utm.my

5.2.1 Improper Integral Type I

1) If
$$f(x)$$
 is continuous in the interval $[a,\infty)$,
then $\int_{a}^{\infty} f(x) dx = \lim_{T \to \infty} \int_{a}^{T} f(x) dx$.

2) If f(x) is continuous in the interval $(-\infty, b]$,

then
$$\int_{-\infty}^{b} f(x) dx = \lim_{T \to -\infty} \int_{T}^{b} f(x) dx.$$

Note: the improper integrals in 1) and 2) is said to *converge* if the limit exists and *diverge* if the limit does not exist.

3) If
$$f(x)$$
 is continuous in the interval $(-\infty,\infty)$,
then $\int_{-\infty}^{\infty} f(x) dx = \int_{-\infty}^{c} f(x) dx + \int_{c}^{\infty} f(x) dx$

with any real number c.

Note: the improper integrals in 3) is said to *converge* if both terms converge and *diverge* if either term diverges.

Example 8:

Determine whether the following integrals are convergent or divergent:

$$1) \quad \int_0^\infty e^{-2x} \, dx$$

$$2) \quad \int_0^\infty x e^{-x} \, dx$$

$$3) \quad \int_{-\infty}^{2} \frac{dx}{5 - 2x}$$

$$4) \quad \int_{-\infty}^{\infty} \frac{x}{1+x^2} dx$$

5.2.2 Improper Integral Type II

1) If
$$f(x)$$
 is continuous on $[a,b)$, and

discontinuous at b, then

$$\int_{a}^{b} f(x) \, dx = \lim_{T \to b^{-}} \int_{a}^{T} f(x) \, dx.$$

2) If f(x) is continuous on (a,b], and discontinuous at a, then

$$\int_{a}^{b} f(x) dx = \lim_{T \to a^{+}} \int_{T}^{b} f(x) dx.$$

Note: the improper integrals in 1) and 2) is said to *converge* if the limit exists and *diverge* if the limit does not exist.

3) If
$$f(x)$$
 has discontinuity at c , where
 $a < c < b$, then

$$\int_{a}^{b} f(x) dx = \int_{a}^{c} f(x) dx + \int_{c}^{b} f(x) dx.$$

Note: the improper integrals in 3) is said to *converge* if both terms converge and *diverge* if either term diverges.

Example 9:

Determine whether $\int_0^1 \frac{x}{\sqrt{1-x^2}} dx$ converge or diverge.

Example 10:

Determine whether $\int_{1}^{2} \frac{dx}{1-x^{2}}$ converge or diverge.

Example 11:

Find $\int_{-1}^{1} \ln x \, dx$ if possible.
